Affected Products

All Mako G camera models and modular concept options

Change Description

The Mako housing (back plate, bottom plate, and front flange) surface treatment will be changed from nickel plating to black powder coating. The change is cosmetic and will not have a negative effect on the image quality or camera performance. There are a slight dimension increases (<0.2 mm), see Figure 1 and Figure 2 below for a detailed comparison of the legacy and new finishes.

This housing change is effective from SN 536905675 onwards.

Mako with silver nickel plating surface
Mako with black powder coating surface

Figure 1 – Front flange dimension of old silver nickel plating vs. new black powder coating

Figure 2 – Front flange and back plate vs. bottom plate: housings with legacy silver nickel plating vs. new black powder coating

Reason for Change

Aesthetic change to be consistent with our brand identity and match the colors of our other existing lineup of cameras

Possible successor

Since this is not a discontinuation the item numbers for the affected Mako cameras do not change and will still be available. Therefore, no successor is needed.

The information provided in this PCN notification are subject to change without notice.
